

PACIFICGOLD[®]

INCLUDING AN INTRODUCTION TO THE DULUX
ARCHITECTURAL RANGE

POWDER COATING Colours for Decor & Industry

The Dulux® Pacificgold® functional and decorative product range.

ARMOURSPRAY® EP 912

Armourspray® Environmental Protection has been formulated to perform in environments where most other powders would find the going too tough. Dulux® Armourspray® EP, as an antigrffiti coating is recommended for use on public transport, street furniture, signs and playground equipment where graffiti is most prominent.

Dulux® Armourspray® EP has been used on projects including the Great South Pacific Express and Telecom New Zealand phone boxes.

PACIFICGOLD® COPOL™ 953

Pacificgold® Copol™ 953 line is a range of polyester epoxy powder coatings and is recommended for use in applications where resistance to general chemicals and reasonable hardness is required. Pacificgold® Copol™ powders are used extensively in shelving for supermarkets and industry, for tapware, automotive sub components and appliances.

PACIFICGOLD® PG 288™

Pacificgold® PG288™ Line is a range of tough polyester powder coatings that may be used on a multitude of metal substrates: from window frames to shelving, office furniture to pool fences, whitegoods to garden tools, outdoor furniture to automotive components.

PG288™ is hardy and durable. The matt and satin finishes are ideal for use on metal areas exposed to abrasion from handling, stacking or people traffic. PG288™ is often used for shop front frames, commercial furniture and shelving.

PYROTEC™ 913, 939 and 979

Pyrotec™ 913, 939 and 979 lines are a range of stock and made to order heat resistant powders called Pyrotec™ HR (Heat Resistant). The range includes Pyrotec™ HR180, Pyrotec™ HR350 and Pyrotec™ HR500. The Pacificgold® Pyrotec™ HR series are by nature low gloss finishes but can be formulated so that they appear smooth. Textures and special FX such as metallic are also available.

ZINCSHIELD™ PRIMER 990

Zincshield™ Primer 990 line is designed to provide additional corrosion inhibition on abrasively blasted steel products. The Zinc component provides sacrificial opportunities to the steel whilst the epoxy resin system provides improved chemical resistance and coating adhesion.

The Pacificgold® colour range

These colours have been selected to provide an exciting range of finishes principally for industrial applications. These finishes have not been designed for architectural applications and further information should be sought before specifying any of these colours for architectural joinery, cladding or fittings.

The lucent range of colours are transparently designed for use over polished or bright substrates for interior decorative use only.

Information included in the colour matrix on this colour chart includes an estimation of the expected exterior durability of each colour on a scale of 1 - 5 where 1 is an interior only colour through 5 where the colour is rated very light fast. These values are estimations only and no warranty is attached or expressed.

Gloss levels are detailed as are light reflectancy percentages.

Each colour has an RGB value for use with computer aided design programs where colour representation is required.

The colours represented on this colour chart are indications only. They are as close to the actual product colours as modern printing processes allow and have been matched to outdoor daylight viewing. The colour appearance may vary according to light source.

Where colour is critical, samples of the actual powder coating should be sought from Dulux Powder & Industrial Coatings.

When specifying these colours, be sure to specify the entire product reference and name. There are many examples of different products having the same name for quite different colours or finishes.

The Dulux® architectural range

Dulux® offer a range of powder coatings designed for use on architectural aluminium joinery and accessories. These powder coatings can also be used over a myriad of substrates and may be used in conjunction with Dulux® Zincshield™ over mild steel. Duralloy®, Duratec® and Electro™ all have their own colour cards, featuring a range of stock colours while Fluoroset® FP is a made to order product.

Dulux® Duralloy® Generation 2 is a new high durability performance powder coating that has very good scratch resistance properties and a 30% improvement in UV resistance over standard powder coatings. Dulux® Duralloy® Generation 2 has improved appearance, tougher formulation and is available as stock in over 80 fashionable solid and pearlescent colours. See the Duralloy® Colour Guide for additional colours and information.

Dulux® Duratec® is recommended for use on premium residential and commercial developments. Duratecs chemistry ensures very good scratch and mar resistance in busy traffic areas within business offices, hospitals and shopping districts and has excellent external properties to withstand the harsh New Zealand climate including salt spray.

Fluoroset® FP has been formulated specifically for prestigious architectural applications where superior colour stability, gloss retention, mar resistance and general serviceability is demanded. Fluoroset® FP exceeds the performance of high and super performance polyester powder coatings and is formulated using 100% fluoropolymer resin. As no other resins are incorporated, Fluoroset® FP maintains an intrinsic hardness which makes it extremely suitable for use in high traffic zones irrespective of exposure to sunlight.

The Electro™ range is based on high durability polyester technology to produce a tough, very matt yet tactile finish also displaying modern metallic and solid colour effects. In some cases reminiscent of an anodised finish, yet with all the advantages of modern, high durability powder coating. See the Electro™ range colour card for colours and additional information.

For additional information or colour cards, call the Dulux Powder & Industrial Coatings Customer Services team on 0800 800 975.

As lethal as a Silver Bullet

clinikill™ is a very effective tool in the control of bacteria, yeast and fungi. clinikill™ is available in most powder coating chemistries, colours and special FX product and as a consequence may be used in a myriad of environments.

Independent testing by specialist external laboratories to the Japanese industrial Standard JIS Z 2801:2000 has shown clinikill™ technology to be effective against many strains of bacterium, fungi and yeast.

Examples of bacteria tested. Bacillus cereus, E.coli, Pseudomonas aeruginosa, Staphylococcus aureus, Methicillin resistant, Straphylococcus aureus (MRSA), Salmonella enteriditis.

Worth doing, worth Dulux.
